In anatomy, there are two posterior tibial veins of the lower limb.They receive blood from the medial and lateral plantar veins and drain the posterior compartment of the leg and the plantar surface of the foot to the popliteal vein which it forms when it joins with the anterior tibial vein.. Like most deep veins, posterior tibial veins are accompanied by an homonym artery, the posterior ...

A deep vein is a vein that is deep in the body. This contrasts with superficial veins that are close to the body's surface.. Deep veins are almost always beside an artery with the same name (e.g. the femoral vein is beside the femoral artery).Collectively, they carry the vast majority of the blood.
