### **Blood Substitutes Present And Future**

A blood substitute (also called artificial blood or blood surrogate) is a substance used to mimic and fulfill some functions of biological blood. It aims to provide an alternative to blood transfusion, which is transferring blood or blood-based products from one person into another. Thus far, there are no well-accepted oxygen-carrying blood substitutes, which is the typical objective of a red ...

1. Introduction. Over 250,000 heart valves are replaced worldwide each year in humans with valvular heart disease. Replacement of a heart valve can be accomplished using mechanical valves, or biological tissue, e.g., an autograft (from the patient's own tissues), a homograft (allograft, from a human cadaver), or a xenograft (from an animal source).
