Star charts are literally maps of the sky. We use them for a number of purposes, such as telling us what time of night certain stars and constellations will be visible, plotting the positions of the Sun, Moon, and planets against the background stars, and locating non-stellar objects such as nebulae and galaxies in the sky.

### **Exploring the Night Sky | Imaging the Universe**

A laser pointer flits across the night sky, pointing to various stars and constellations as a member of the Astronomy Club gives the audience some facts about the stars. Other members set up telescopes, assisting the group so that they can get a closer look of the wonders of the sky.

### **Exploring the night sky - The Aggie**

Leo dominates the southern sky in the spring. Each night Leo appears to move a little more to the west. Over in the western sky is Orion and the bright stars of winter still hanging on. Not for long though, because this month it appears that Leo is chasing the winter stars out of the sky and as he does so we get warmer weather.

### **What's up in Tonight's Sky - Beckstrom Observatory**

Exploring the Night Sky with Binoculars was written to be a companion handbook to The Night Sky planisphere, serving as a general introduction to observational astronomy. It covers both what can be seen in the sky and the significance of what is seen.
