Food Innovation and Product Design International MASTER

Animals are used as food either directly or indirectly by the products they produce. Meat is an example of a direct product taken from an animal, which comes from muscle systems or from organs.. Food products produced by animals include milk produced by mammary glands, which in many cultures is drunk or processed into dairy products (cheese, butter, etc.).

Human Factors Studies and Related Clinical Study ...

Secondary food processing is the everyday process of creating food from ingredients that are ready to use. Baking bread, regardless of whether it is made at home, in a small bakery, or in a large factory, is an example of secondary food processing. Fermenting fish and making wine, beer, and other alcoholic products are traditional forms of secondary food processing.

Jenn David Connolly Post author July 31, 2017 at 7:00 am. Hi Maggie, A logical approach would be to base the packaging colors on the petits fours colors if they are colorful. You want the packaging to be an extension of the product inside since the consumer won't be able to see the product, assuming this is a retail product.

Colors that Influence Food Sales - Jenn David Design
