Tornado is a Python web framework and asynchronous networking library, originally developed at FriendFeed. By using non-blocking network I/O, Tornado can scale to tens of thousands of open connections, making it ideal for long polling, WebSockets, and other applications that require a long-lived connection to each user.

Tornado Web Server — Tornado 6.0.2 documentation

If you are like me, you may have seen experiments done where a tornado is created using two bottles joined together at the mouth using a tornado tube connector, but never an experiment where a tornado is created using just one bottle. Because of that, I wanted to experiment to see if we could get... [read more]
