### **Key Concepts In Geomorphology**

Geomorphology (from Ancient Greek: γῆ, gē, "earth"; μορφή, morphé, "form"; and λόγος, lógos, "study") is the scientific study of the origin and evolution of topographic and bathymetric features created by physical, chemical or biological processes operating at or near the Earth's surface. Geomorphologists seek to understand why landscapes look the way they do, to understand ...

Historical development. Nicolaus Steno, also known as Niels Stensen, was the first to observe and propose some of the basic concepts of historical geology. One of these concepts was that fossils originally came from living organisms. The other, more famous, observations are often grouped together to form the laws of stratigraphy. James Hutton and Charles Lyell also contributed to early ...

Regionalization as a result of man/environment relationship: natural regions and human regions. Before becoming the target of systematic concerns, regional studies sought, above all, to identify specificities, curiosities and descriptions of the most different parts of the globe (Claval, 1974). From the mid-eighteenth century several forms of description, classification and analysis techniques ...

Eighteen months after Hurricane Harvey devastated the Texas Gulf Coast, recovery efforts and flood management projects continue as the region improves its resiliency for future events. Although unprecedented, Houston's catastrophic flooding from Harvey was not without foreshadowing. Tax Day 2016, Memorial Day 2015 and other storms had caused similar flooding across portions of the Greater ...

1. Introduction. Several important secondary mineral deposits form during the evolution of the regolith and landscape. Lateritization is a weathering process, occurring under humid tropical climates, leading to the dissolution of most soluble elements, such as K, Na, Mg, Ca and some Si, accumulating less soluble elements such as Fe and Al.
