### Perfect Square Definition Math

In number theory, a perfect number is a positive integer that is equal to the sum of its proper positive divisors, that is, the sum of its positive divisors excluding the number itself (also known as its aliquot sum). Equivalently, a perfect number is a number that is half the sum of all of its positive divisors (including itself) i.e.  $\sigma_1(n) = 2n$ . ...

An irrational number is a number that cannot be expressed as a fraction  $p/q$  for any integers  $p$  and  $q$ . Irrational numbers have decimal expansions that neither terminate nor become periodic. Every transcendental number is irrational. There is no standard notation for the set of irrational numbers, but the notations  $\mathbb{Q}^c$ ,  $\mathbb{R} \setminus \mathbb{Q}$ , or  $\mathbb{R} \setminus \mathbb{Q}$ , where the bar, minus sign, or backslash indicates the set ...

These are all integers (click to mark), and they continue left and right infinitely: Some People Have Different Definitions! Some people (not me) say that whole numbers can also be negative, which makes them exactly the same as integers.. And some people say that zero is NOT a whole number. So there you go, not everyone agrees on a simple thing!

In mathematics, a partial function from  $X$  to  $Y$  (sometimes written as  $f : X \rightrightarrows Y$  or  $f: X \twoheadrightarrow Y$ ) is a function  $f: X' \rightarrow Y$ , for some subset  $X'$  of  $X$ . It generalizes the concept of a function  $f : X \rightarrow Y$  by not forcing  $f$  to map every element of  $X$  to an element of  $Y$  (only some subset  $X'$  of  $X$ ). If  $X' = X$ , then  $f$  is called a total function for emphasizing that its domain is not a proper ...
