Palliative care is an interdisciplinary approach to specialized medical and nursing care for people with life-limiting illnesses. It focuses on providing relief from the symptoms, pain, physical stress, and mental stress at any stage of illness. The goal is to improve quality of life for both the person and their family. Evidence as of 2016 supports palliative care's efficacy in the improvement ...

Palliative care - Wikipedia

Palliative care can be helpful through all stages of illness. Early on, it can help make medical treatments more tolerable; at later stages, it can reduce suffering, help you carry on with daily life, assist you in planning for future medical care, and provide support for living with a life-threatening illness.
