Software Defined Networking Design And

Software-defined networking (SDN) technology is an approach to network management that enables dynamic, programmatically efficient network configuration in order to improve network performance and monitoring making it more like cloud computing than traditional network management. SDN is meant to address the fact that the static architecture of traditional networks is decentralized and complex ...

Software-defined storage industry. VMware used the marketing term "software-defined data center" (SDDC) for a broader concept wherein all the virtual storage, server, networking and security resources required by an application can be defined by software and provisioned automatically. Other smaller companies then adopted the term "software-defined storage", such as Coraid (now owned by Coraid ...

Software-defined Networking (SDN) ist ein Ansatz zum Bau von Computernetz-Geräten und Software, die zwei wesentliche Komponenten solcher Geräte voneinander trennt und abstrahiert. Dabei handelt es sich um die Control Plane und die Data Plane. Erste Konzepte hierzu stammen von der Stanford University aus der Zeit um 2005. 2013 bezeichnen viele Hersteller ihre Produkte als SDN-fähig, sodass ...
