### **The Earth System Kump**

Earth system science (ESS) is the application of systems science to the Earth sciences. In particular, it considers interactions between the Earth's "spheres"—atmosphere, hydrosphere, cryosphere, geosphere, pedosphere, biosphere, and, even, the magnetosphere—as well as the impact of human societies on these components. At its broadest scale, Earth system science brings together

In the 1990s, scientists thought asteroid impacts had triggered five mass extinctions, including the extinction of the dinosaurs 65 million years ago. It started with volcanic eruptions, which ignited carbon-rich sediments, infusing the atmosphere with a jolt of new carbon dioxide.

Viewpoint: No, either life began on the surface during the period known as the late heavy bombardment, or it began in a protected environment away from the surface and the devastating impacts. The origin of life on Earth is one of the most important, and elusive, problems in science. Efforts to understand the origin of life have been frustrated by lack of evidence.

Fig. 1. Schematic evolution of the Earth System over geologic time. At the top we track changes in solar output relative to present levels calculated from Gough (1981). Below we track proposed trajectories of atmospheric CO<sub>2</sub> and O<sub>2</sub> levels presented relative to Present Atmospheric Levels (PAL; 280 ppm CO<sub>2</sub>; 200,000 ppm O<sub>2</sub>). The CO<sub>2</sub> field is taken from the 1D model of von Paris et al. (2008 ...

Background. The concept of the oceanic anoxic event (OAE) was first proposed in 1976 by Seymour Schlanger (1927–1990) and geologist Hugh Jenkyns and arose from discoveries made by the Deep Sea Drilling Project (DSDP) in the Pacific Ocean. It was the finding of black carbon-rich shales in Cretaceous sediments that had accumulated on submarine volcanic plateaus (Shatsky Rise, Manihiki Plateau ...

If today you again take the perspective of the last 30 years and extrapolate far into the future, it is possible to conclude that the short-term trend is warming (figure 1).<sup>9</sup> Actually, over the last century, it appears that the temperature rose from 1900 to 1940, declined slightly from 1940 to 1970 and increased from 1980 to around 2000. It is easy to make headlines by drawing sweeping ...

Down to the Wire (by David W. Orr). Confronting Climate Collapse. Down to the Wire describes how political negligence, an economy based on the insatiable consumption of trivial goods, and a disdain for the well-being of future generations have brought us to a tipping point. Due to our refusal to live within natural limits, we now face a long emergency of rising temperatures, rising sea-levels ...

L'acidificazione degli oceani è il nome dato alla decrescita del valore del pH oceanico, causato dalla assunzione di anidride carbonica di origine antropica dall'atmosfera. Circa un quarto della CO<sub>2</sub> presente nell'atmosfera va a finire negli oceani dove si trasforma in acido carbonico (H<sub>2</sub>CO<sub>3</sub>).. All'aumento di CO<sub>2</sub> nell'atmosfera corrisponde perciò un corrispondente incremento di quella ...
