The Illustrated Wildlife Encyclopedia Bugs

insects, bugs. Scientific name: phylum Arthropoda, class Insecta. Insects are one of the better studied groups of New Zealand invertebrates, but their enormous diversity (there are many thousands of species in New Zealand, and millions of species worldwide) makes it a difficult group to summarize. This page will only touch on the diversity, biology, and habitats of New Zealand soil and litter ...

Arachnocampa is a genus of five fungus gnat species which have a luminescent larval stage, akin to the larval stage of glowworm beetles. The species of Arachnocampa are endemic to New Zealand and Australia, dwelling in caves and grottos, or sheltered places in forests.. A previous synonym was "Bolitiphila," meaning "mushroom lover," in the past. The name was changed in 1924 to Arachnocampa ...

Pest control is the regulation or management of a species defined as a pest, a member of the animal kingdom that impacts adversely on human activities. The human response depends on the importance of the damage done, and will range from tolerance, through deterrence and management, to attempts to completely eradicate the pest.

The cicadas (/ s ɪ ' k ɑː d ə / or / s ɪ ' k eɪ d ə /) are a superfamily, the Cicadoidea, of insects in the order Hemiptera (true bugs). They are in the suborder Auchenorrhyncha, along with smaller jumping bugs such as leafhoppers and froghoppers. The superfamily is divided into two families, Tettigarctidae, with two species in Australia, and Cicadidae, with more than 3,000 species ...

Aardvark Aardvark Classification and Evolution Aardvarks are small pig-like mammals that are found inhabiting a wide range of different habitats throughout Africa, south of the Sahara. They are mostly solitary and spend their days sleeping in underground burrows to protect them from the heat of the African sun, emerging in the cooler evening to search for food.

Aardvark (Orycteropus Afer) - Animals - A-Z Animals

"The power to recognize trees at a glance without examining their leaves or flowers or fruit as they are seen, for example, from the car-window during a railroad journey, can only be acquired by studying them as they grow under all possible conditions over wide areas of territory.
