

## *The Metamorphosis Of Plants*

### **The Metamorphosis Of Plants**

Metamorphosis is a series of changes through which an organism goes in developing from an early immature stage to an adult. Most people are familiar with the process, for example, by which a butterfly or moth emerges from a chrysalis (cocoon) in its adult form or a frog or toad passes through its tadpole stage.

Metamorphosis is a biological process by which an animal physically develops after birth or hatching, involving a conspicuous and relatively abrupt change in the animal's body structure through cell growth and differentiation. Metamorphosis is iodothyronine-induced and an ancestral feature of all chordates. Some insects, fishes, amphibians, mollusks, crustaceans, cnidarians, echinoderms, and ...

### **Metamorphosis - Wikipedia**

Metamorphosis is the series of developmental stages insects go through to become adults. Butterflies and moths have four stages of life: egg, larva (the caterpillar stage), pupa (the chrysalis phase in a butterfly's development), and adult.

Metamorphosis of Narcissus (1937) is an oil-on-canvas painting by the Spanish surrealist Salvador Dalí. This painting is from Dalí's paranoiac-critical period. According to Greek mythology, Narcissus fell in love with his own reflection in a pool. Unable to embrace the watery image, he pined away, and the gods immortalized him as a flower.
